hibernate复制一条数据

2017年1月12日 13:00

控制器中调用 MyBeanUtils类的copy方法

```java
,
@RequestMapping(params = "doCopyFile")
@ResponseBody
public AjaxJson doCopyFile(HttpServletRequest request,String fileId,String newPId) {
    String message = null;
    AjaxJson j = new AjaxJson();
    message = "复制文件成功";
    DocMyFileEntity newFileObject=new DocMyFileEntity();

    DocMyFileEntity copyFile = docMyFileService.get(DocMyFileEntity.class, fileId);
    try{
        MyBeanUtils.copyBeanNotNull2Bean(copyFile,newFileObject); //第一个参数是数据有更新的对象 第二个是新的要保存的对象
        newFileObject.setpId(newPId);
        docMyFileService.save(newFileObject);
    }catch (Exception e) {
        e.printStackTrace();
        message = "复制文件失败";
        throw new BusinessException(e.getMessage());
    }
    j.setMsg(message);
    return j;
}
```
